DISCLAIMER - NARROW REED GLASS

We value transparency and want to ensure you have all the information needed to make the right decision for your project.

Due to the depth and texture of the reed pattern, the edges of the glass may not appear completely smooth. This is a natural characteristic of textured glass and forms part of its decorative appeal.

In addition, because this product is toughened for strength and safety, a degree of bowing or slight curvature may occur because of the heating and cooling process during manufacturing. This is an inherent and unavoidable characteristic of toughened glass. The level of bow may vary depending on panel size and thickness and is considered within standard industry tolerances.

Glass bowing is not a defect and does not affect the structural integrity, safety, or performance of the product. However, it should be carefully considered in applications where precise flatness or alignment is critical.

Narrow Reed glass is primarily intended for decorative use. If your project requires perfectly flat or completely seamless finishes, we strongly recommend discussing your requirements with us before placing your order to ensure this product is suitable.

By proceeding with your order, you acknowledge and accept the natural characteristics of Narrow Reed toughened glass, including possible edge variation and glass bowing within accepted manufacturing tolerances.

Please Note: Product information is accurate at the time of publication and may be updated without notice.
